

For measuring temperature, humidity and CO<sub>2</sub> in the room and for regulating the room temperature and/or ventilation. Thanks to MP-Bus communication and integrated analogue outputs, the room operating units can be seamlessly connected to existing third-party controllers. Commissioning and parametrising of the device are conveniently done with the Belimo Assistant App. The end user can access the device via the Belimo Display App to read room values and to adjust the temperature setpoint.

MP-BUS®

## Type Overview

Type	Communication	Voltage output	Measured values	Setpoint	Display type
P-22RTM-1900A-1	MP-Bus	3 x 0...5 V, 0...10 V, 2...10 V	CO <sub>2</sub> , Temperature, Relative humidity, Dew point	Temperature	Belimo Display App and LED
P-22RTH-1900A-1	MP-Bus	3 x 0...5 V, 0...10 V, 2...10 V	Temperature, Relative humidity, Dew point	Temperature	Belimo Display App

## Technical data

<b>Electrical data</b>	Nominal voltage	AC/DC 24 V
	Nominal voltage range	AC 19.2...28.8 V / DC 19.2...28.8 V
	Power consumption AC	1 VA
	Power consumption DC	0.5 W
	Electrical connection	Spring loaded terminal 0.25...1.5 mm <sup>2</sup>
	Cable entry	Back side Top side Bottom side
<b>Data bus communication</b>	Communication	MP-Bus
	Number of nodes	MP-Bus max. 8 (16)
<b>Functional data</b>	Sensor Technology	CO <sub>2</sub> : NDIR (non dispersive infrared) dual channel
	Application	Air
	Voltage output	3 x 0...5 V, 0...10 V, 2...10 V
	Output signal active note	Output 0...5 V, 0...10 V (factory setting), 2...10 V selectable via NFC min. resistance 5 kΩ
	Display	Belimo Display App and LED The LED is used for the CO <sub>2</sub> TLF (traffic light function). The LED can be parametrised and deactivated via Belimo Assistant App. (Type (P-)22RTM-...)

<b>Measuring data</b>	Measured values	CO <sub>2</sub> Relative humidity Dew point Temperature
	Measuring range CO <sub>2</sub>	Default setting: 0...2000 ppm
	Measuring range humidity	Default setting: 0...100% RH
	Measuring range temperature	Default setting: 0...50°C [-32...122°F]
	Measuring range dew point	Default setting: -50...50°C [-60...120°F]
	Accuracy CO <sub>2</sub>	±(50 ppm + 2% of measured value)
	Accuracy humidity	±2% between 0...90% RH @ 25°C
	Accuracy temperature active	±0.5°C @ 25°C [±0.9°F @ 77°F]
	Long-term stability	±20 ppm p.a. ±0.25% RH p.a. @ 25°C @ 50% RH ±0.03°C p.a. @ 25°C [±0.05°F p.a. @ 77°F]
<b>Materials</b>	Housing	PC, white, RAL 9003
<b>Safety data</b>	Protection class IEC/EN	III, Protective Extra-Low Voltage (PELV)
	Degree of protection IEC/EN	IP30
	EU Conformity	CE Marking
	Quality Standard	ISO 9001
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	0...50°C [32...122°F]

### Safety notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application. Unauthorised modifications are prohibited. The product must not be used in relation with any equipment that in case of a failure may threaten humans, animals or assets.

Ensure all power is disconnected before installing. Do not connect to live/operating equipment. Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

### Remarks

<b>General remarks concerning sensors</b>	The measuring result is influenced by the thermal characteristics of the wall. A solid concrete wall responds to thermal fluctuations within a room more slowly than a light-weight structure wall. A room sensor always detects a mixture of air and wall temperature. This means that the radiant heat of the wall, which is important for comfort, is also included in the measurement result.
<b>Build-up of self-heating by electrical dissipative power</b>	<p>Temperature sensors with electronic components always have a dissipative power which affects the temperature measurement of the ambient air. The dissipation in active temperature sensors shows a linear increase with rising operating voltage. The dissipative power should be taken into account when measuring temperature.</p> <p>Belimo room sensors have adaptive temperature compensation for the entire supply voltage range. This ensures that the ambient temperature is detected with the highest accuracy at all times.</p>

### Application notice for humidity sensors

Refrain from touching the sensitive humidity sensor element. Touching the sensitive surface will void warranty.

When exposed to harsh environmental conditions such as high ambient temperature and/or high levels of humidity, or presence of aggressive gases (i.e. chlorine, ozone, ammonia), the sensor element may be affected and readings may be outside the specified accuracy. Replacement of deteriorated humidity sensors due to harsh environmental conditions is not covered by the general warranty.

The sensor shows best performance when operated within recommended normal temperature range of 5...60°C and humidity range of 20...80% RH. Long-term exposure to conditions outside normal range, especially at high humidity, may temporarily offset the humidity signal (e.g. +3% RH after 60h kept at >80% RH). After returning into the normal temperature and humidity range, the sensor will slowly come back to calibration state by itself.

### Information self-calibration feature CO<sub>2</sub>

All CO<sub>2</sub> sensors are subject to drift caused by the aging process of the components, resulting in regular re-calibration or replacement of units. However, the dual channel technology integrates automatic self-calibration technology vs. common used ABC-Logic sensors. Dual channel self-calibration technology is ideally suited for applications operating 24/7 hours such as those in hospitals or other commercial applications. Manual calibration is not required.

## Indicators and Operation

Operation

### 1 CO<sub>2</sub> TLF (traffic light function), available on the (P-)22RTM-.. sensor

Colours: green, yellow and red. LED can be parametrised and deactivated via Belimo Assistant App.

With the Belimo Display App, actual values of the room unit can be displayed and setpoints can be adjusted. This means that no display on the room unit is required. Thanks to communication via NFC (near field communication), third parties cannot access safety critical data.

How it works:

1. Download the Belimo Display App
2. Hold the smartphone to the room unit
3. View/adjust actual values or setpoints
4. To activate the setpoints, hold the smartphone to the room unit again

## Scope of delivery

Screws

**Accessories**

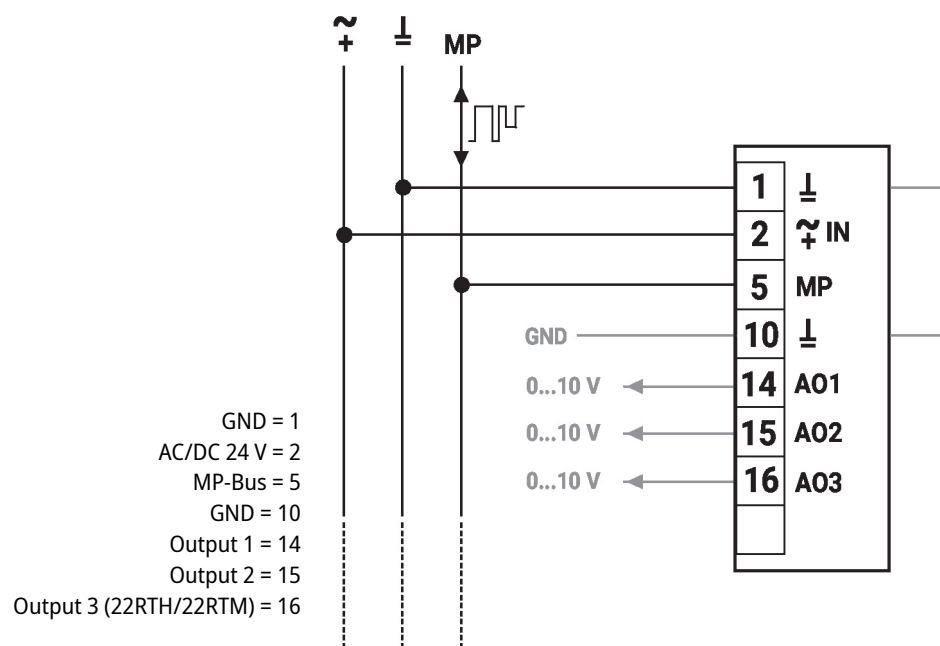

Tools	Description	Type
	Belimo Display App	Belimo Display App
	Belimo Assistant App, Smartphone app for easy commissioning, parametrising and maintenance	Belimo Assistant App
	Converter Bluetooth / NFC	ZIP-BT-NFC

**Service**

- NFC connection** Belimo equipment marked with the NFC logo can be operated and parameterized with the Belimo Assistant App.
- Requirement:
- NFC- or Bluetooth-capable smartphone
  - Belimo Assistant App (Google Play & Apple AppStore)
- Align NFC-capable smartphone on the sensor so that both NFC antennas are superposed.
- Connect Bluetooth-enabled smartphone via the Bluetooth-to-NFC Converter ZIP-BT-NFC to the sensor. Technical data and operation instructions are shown in the ZIP-BT-NFC data sheet.

**Wiring diagram**

- Notes** Analogue outputs: The analogue outputs AO1, AO2 and AO3 can be parametrised via NFC.
-  Factory settings:
- AO1: Temperature
  - AO2: Setpoint Temperature
  - AO3: 22RTH: Humidity, 22RTM: CO<sub>2</sub>

## Dimensions

Type	Weight
P-22RTM-1900A-1	0.124 kg
P-22RTH-1900A-1	0.113 kg
