

Characterised control valve, 6-way, Internal thread

- Two sequences (cooling/heating) with one 90° rotary actuator
- Switching or modulating control on the water side of thermal heating/ cooling elements
- For closed cold and warm water systems

Technical data

| Functional data | Media | Cold and warm water, water with glycol up to max. 50% vol. | | |
|-----------------|-----------------------------|--|--|--|
| | Medium temperature | 680°C | | |
| | Permissible pressure ps | 1600 kPa | | |
| | Differential pressure Apmax | 100 kPa | | |
| | Differential pressure note | low-noise operation Δpv100 < 50kPa | | |
| | Flow characteristic | Linear | | |
| | Leakage rate | Leakage rate A, air-bubble-tight (EN 12266-1) | | |
| | Pipe connector | Internal thread according to ISO 7-1 | | |
| | Angle of rotation | 90° | | |
| | Angle of rotation note | Sequence 1: 030° (Cooling recommended) Dead zone: 3060° | | |
| | | Sequence 2: 6090° (Heating recommended) | | |
| | Installation position | Upright to horizontal (in relation to the stem) | | |
| | Maintenance | Maintenance-free | | |
| Materials | Body | Brass body nickel-plated | | |
| | Closing element | chrome-plated brass | | |
| | Stem | Nickel-plated brass | | |
| | Stem seal | O-ring EPDM | | |
| | Ball seat | PTFE, O-ring EPDM | | |
| | Flow rate diaphragms | rostfreier Stahl | | |
| | | | | |

Safety notes

- The valve has been designed for use in stationary heating, ventilation and airconditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.

| Product features | |
|-----------------------|--|
| Mode of operation | The 6-way characterised control valve is adjusted by a rotary actuator. The actuator is connected by a modulating control system or a MP-Bus signal and moves the ball of the ball valve to the position dictated by the positioning signal. If the valve is adjusted in the clockwise direction (till the end stop), e.g. the cooling sequence is completely enabled; if the valve is adjusted in the counter-clockwise direction (90°), e.g. the heating sequence is completely enabled. |
| Pressure compensation | In cases of combined heating/cooling control elements, the medium remains in the control element when in the closed position (no heating or cooling). The pressure of the enclosed medium can rise or fall due to changes in medium temperature caused by the ambient temperature. The 6-way characterised control valves have an integrated pressure relief function for the purpose of compensating for such pressure changes. The pressure relief function is active in the closed position (45°) of the valve; reliable separation of Sequences 1 and 2 continues. For additional information, consult the notes for project planning for the 6-way characterised control valve. |

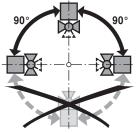

Accessories

| | Description | Туре |
|------------------------|--|--------|
| Mechanical accessories | Pipe connector to ball valve DN 15 Rp 1/2" | ZR2315 |
| | Fastening angle, for 6-way control valves | ZR-004 |
| | Pipe connector to ball valve DN 20 Rp 3/4" | ZR2320 |
| | Fastening angle, for 6-way control valves (DN25) | ZR-005 |
| | Pipe connector to ball valve DN 25 Rp 1" | ZR2325 |

Installation notes

Recommended installation positions

The ball valve can be installed upright to horizontal. The ball valve may not be installed in a hanging position, i.e. with the stem pointing downwards.

| Water quality requirements | The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installatio work). The installation of suitable strainer is recommended. | | | | | |
|----------------------------|---|--|--|--|--|--|
| Maintenance | Ball valves and rotary actuators are maintenance-free. Before any service work on the final controlling device is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and allways reduce the system pressure to ambient pressure | | | | | |

down first if necessary and allways reduce the system pressure to ambient pressure level). The system must not be returned to service until the ball valve and the rotary actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

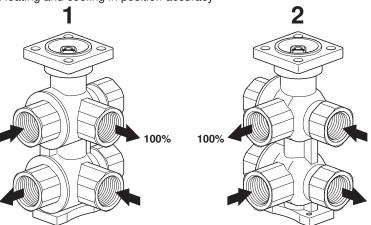

Installation notes

Flow direction

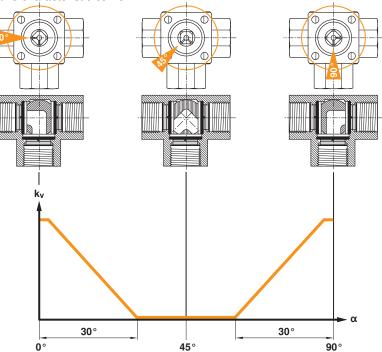

The flow direction must be observed. The position of the ball can be identified from the L-marking on the stem.

Heating and cooling in position accuracy

Valve characteristic curve

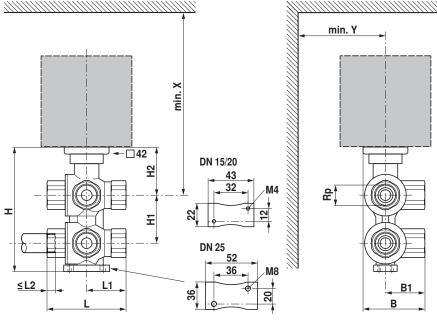

The lower diagram shows the valve characteristic curve in relation to the ball position. Valve characteristic curve

Dimensions / Weight

Dimensional drawings

The actuator dimensions can be found on the respective actuator data sheet.
