Product features				
Mode of operation	moves the valve to the op	I with a standard modulating signal 010 V. The actuator erating position at the same time as tensioning the return d back to the fail-safe position by spring force when the ed.		
Simple direct mounting		the rotary valve or butterfly valve with mounting flange. The lation to the fitting can be selected in 90° steps.		
Manual override		he valve can be operated manually and engaged with the tion. Unlocking is carried out manually or automatically by tage.		
Adjustable angle of rotation	Adjustable angle of rotation	on with mechanical end stops.		
High functional reliability	The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.			
Flexible signalization		iliary switch with a fixed setting and one adjustable auxiliary 6 or 1190% angle of rotation to be signaled.

Auxiliary switch settings

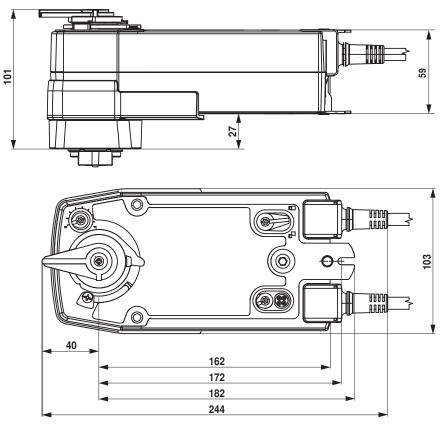

Note: Perform settings on the actuator only in deenergised state. Manual override Turn the hand crank until the desired switching position is set. 2 Spindle clamp Edge line (A) displays the desired switching position of the actuator on the scale. 3 Fasten the locking device Turn the locking switch to the "Locked padlock" symbol. Auxiliary switch Turn rotary knob until the notch points to the arrow symbol. Unlock the locking device Turn the locking switch to the "Unlocked padlock" symbol or unlock with the hand crank. Cable Connect continuity tester to S4 + S5 or to S4 + S6. Manual override Turn the hand crank until the desired switching position is set and check whether the continuity tester shows the switching point.
