

Cloud capable and communicative damper actuator for adjusting dampers in technical building installations

- Air damper size up to approx. 1 m²
- Torque motor 5 Nm
- Nominal voltage AC/DC 24 V

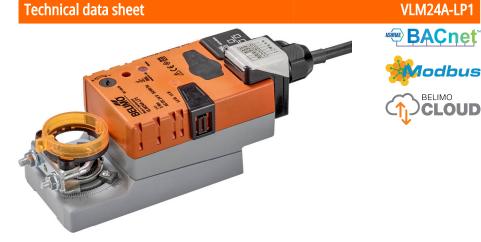

• Control modulating, communicative, hybrid, Cloud

• Conversion of sensor signals

• Ethernet 10/100 Mbit/s, TCP/IP, integrated web server

• Communication via BACnet IP, Modbus TCP and Cloud

Technical data

Electrical data	Nominal voltage	AC/DC 24 V		
	Nominal voltage frequency	50/60 Hz		
	Nominal voltage range	AC 19.228.8 V / DC 21.628.8 V		
	Power consumption in operation	4 W		
	Power consumption in rest position	3 W		
	Power consumption for wire sizing	6 VA		
	Connection supply / control	Cable 1 m, 6 x 0.5 mm ²		
	Connection Ethernet	RJ45 socket		
	Parallel operation	Yes (note the performance data)		
Functional data	Torque motor	5 Nm		
	Communicative control	Cloud		
		BACnet IP		
		Modbus TCP		
	Operating range Y	210 V		
	Input Impedance	34 kΩ		
	Operating range Y variable	0.510 V		
	Position accuracy	±5%		
	Direction of motion motor	selectable with switch 0/1		
	Direction of motion note	Y = 0%: At switch position 0 (ccw rotation) / 1 (cw rotation)		
	Manual override	with push-button, can be locked		
	Angle of rotation	Max. 95°		
	Angle of rotation note	can be limited on both sides with adjustable mechanical end stops		
	Running time motor	150 s / 90°		
	Running time motor variable	35150 s		
	Adaptation setting range	manual		
	Sound power level, motor	35 dB(A)		
	Mechanical interface	Universal shaft clamp 620 mm		
	Position indication	Mechanically, pluggable		
Safety data	Protection class IEC/EN	III Safety Extra-Low Voltage (SELV)		
	Degree of protection IEC/EN	IP40		
	Degree of protection note	IP54 when using protective cap or protective grommet for RJ45 socket		
	EMC	CE according to 2014/30/EU		
	Mode of operation	Type 1		
	Rated impulse voltage supply / control	0.8 kV		
	Control pollution degree	3		
	Ambient temperature

Weight

Storage temperature	-4080°C
Ambient humidity	Max. 95% r.H., non-condensing
Servicing	maintenance-free
Weight	0.56 kg

Safety notes

Safety notes	
	 The device must not be used outside the specified field of application, especially not in aircraft or in any other airborne means of transport. Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time. Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation. The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user. Cables must not be removed from the device. To calculate the torque required, the specifications supplied by the damper manufacturers concerning the cross-section, the design, the installation site and the ventilation conditions must be observed. The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
Product features	
Mode of operation	The actuator is controlled via the Cloud, BACnet IP or Modbus TCP and drives to the position defined by the control signal. Various data points can be written and read via the same interfaces. Hybrid mode: The actuator receives its analog control signal from the higher level controller and drives to the position defined. Using the Cloud, BACnet IP or Modbus TCP, various data points can be read and with the exception of the control signal written.
Converter for sensors	Connection option for two sensors (passive sensor, active sensor or switching contact). The actuator serves as an analogue/digital converter for the transmission of the sensor signal to the higher level system.
Communication	The parametrisation can be carried out through the integrated web server (RJ45 connection to the web browser), by communicative means or via the Cloud.
"Peer to Peer" connection http://belimo.local:8080 The Notebook must be set to "DHCP". Make sure that only one network connection is active. Standard IP address: http://192.168.0.10:8080 Static IP address Password (read-only): User name: «guest» Password: «guest»	Additional information regarding the integrated web server can be found in the separate documentation.
Simple direct mounting	Simple direct mounting on the damper shaft with a universal shaft clamp, supplied with an anti-rotation device to prevent the actuator from rotating.
Data recording	The recorded data (integrated data recording for 13 months) can be used for analytical purposes. Download csv files via web browser.
Manual override	Manual override with push-button possible (the gear is disengaged for as long as the button is pressed or remains locked).
Adjustable angle of rotation	Adjustable angle of rotation with mechanical end stops.

ELIMO	Technical data sheet	VLM24A-LP		
High functional reliability	The actuator is overload protected, requires no limit switches and automatically sto is reached.	os when the end stop		
Home position	The first time the supply voltage is switched on, i.e. at the time of commissioning, the actuator carries of an adaption, which is when the operating range and position feedback adjust themselves to the mechanical setting range.			
	The actuator then moves into the position defined by the positioning signal. $ \underbrace{0\%}_{1} \underbrace{0\%}_{0\%} \underbrace{ccw}_{ccw} $			
Adaptation and synchronisation	An adaption can be triggered manually by pressing the "Adaption" button. Both mo detected during the adaption (entire setting range).	echanical end stops a		
	The actuator then moves into the position defined by the positioning signal.

can be connected

The connection diagrams shows connections for the first sensor on terminal S1, while the second sensor can be connected identically on terminal S2.

Parallel use of different sensor types is permitted.

For hybrid operation, S1 is used for the control signal Y and must be configured as an active sensor.
